- Scientific research

The VaryDisk PICO is a fully functional laser system for industrial applications and/or scientific research. Its pulse characteristics is mainly determined by its seed laser. Our standard configurations include a 10 ps seed, however other pulse durations are

possible, depending on the customer's needs. The choice of pulse duration determines the maximum energy available with this laser system. The system is characterized by its robustness and simplicity.

a) Depends on choice of seed laser
b) Max. pulse energy scales with output pulse duration
